

Hackolade Install (Windows/Mac)

Step 1: Go to [Hackolade](https://hackolade.com/download.html) (<https://hackolade.com/download.html>) and download the current version (4.3.14).

Step 2: Run the installer and go through it. No special setup options needed.

Step 3: Upon starting Hackolade for the first time, a window should pop up and ask for a license key set up. Select the option that says to request a free community license and then click the next in the bottom right of the screen.

Step 4: A browser window should pop up and ask you to input your credentials. After completing the form, you should get an email from Hackolade with the key

Step 5: Go back to Hackolade and the license validation window and now select verify/validate a license key. Paste your key into that field. You don't need to input anything else and just click next.

Installing Firebase Plugin

Step 1: From the home screen of Hackolade, select "Help" from the toolbar on top, go to Plugin Manager.

Step 2: A plugin window will open and may take a second to load the options. Scroll down until you see Firebase (version 0.1.4). Make sure that you do NOT select Firestore. Click install

Step 3: When installing a plugin, Hackolade will want to restart. Let it and upon opening it up again, you can verify that the Firebase plugin installed by going back to plugin manager and going to the installed tab.
